If i may draw some conclusions:

"23710-xyz"

Where 23710 appears to be the generic partnumber for "ECU"

"xyz" is the engine/chassis combo code.

GTRs are 05U

RB25 are 08U

Расшифровка ECU по его заводскому коду

07.10.2009 08:41 - Обновлено 26.02.2010 15:59

RB20DE are 01U

RB20DET are 04U

Some exceptions here - maybe M-spec, Type X / Type S differences? But surely they use the same engine block as the normal ones.

This reminds me of the old "IDing GTR engine blocks" thread. 05U is factory, there are also 24U, 046 numbers that I have heard rumored is for GrpA / N1 blocks?

"y" is gearbox

0 = manual RWD

1 = auto RWD

6 = manual 4WD

7 = auto 4WD.

"z" is a mystery to me. Hard to tell exactly what.

Not ABS/HICAS/ facelift, as my examples point out

(all 100% as I read the ECUs last night and know the spec of the cars).

One GTR code has a 2, the other has a 0.

As far as I know MEC-R213 refers to the chip, as it's stamped next to chip on the circuit board and has lines from MEC-R213, going towards where chip is mounted.

Not sure what the numbers mean after it, but could be related to the chip.
